Third Grade Angels Jerry Spinelli 2012-09-01 The long-awaited prequel to the bestseller FOURTH GRADE RATS George, aka "Suds," has just entered third grade, and he's heard the rhyme about "first grade babies/second grade cats/third grade angels/fourth grade rats," but what does this mean for his school year? It means that his teacher, Mrs. Simms, will hold a competition every month to see which student deserves to be awarded "the halo" - which student is best-behaved, kindest to others, and, in short, perfect. Suds is determined to be the first to earn the halo, but he's finding the challenge of always being good to be more stressful than he had anticipated. Does he have to be good even outside of school? (Does he have to be nice to his annoying little sister?) And if Mrs. Simms doesn't actually see him doing a good deed, does it even count? A warm, funny return to elementary school from master storyteller Spinelli.

Behavioural Investing James Montier 2009-10-09 Behavioural investing seeks to bridge the gap between psychology and investing. All too many investors are unaware of the mental pitfalls that await them. Even once we are aware of our biases, we must recognise that knowledge does not equal behaviour. The solution lies in designing and adopting an investment process that is at least partially robust to behavioural decision-making errors. Behavioural Investing: A Practitioner's Guide to Applying Behavioural Finance explores the biases we face, the way in which they show up in the investment process, and urges readers to adopt an empirically based sceptical approach to investing. This book is unique in combining insights from the field of applied psychology with a through understanding of the investment problem. The content is practitioner focused throughout and will be essential reading for any investment professional looking to improve their investing behaviour to maximise returns. Key features include: The only book to cover the applications of behavioural finance An executive summary for every chapter with key points highlighted at the chapter

Extremophile Fishes Rüdiger Riesch 2015-01-24 This book summarizes the key adaptations enabling extremophile fishes to survive under harsh environmental conditions. It reviews the most recent research on acidic, Antarctic, cave, desert, hypersaline, hypoxic, temporary, and fast-flowing habitats, as well as naturally and anthropogenically toxic waters, while pointing out generalities that are evident across different study systems. Knowledge of the different adaptations that allow fish to cope with stressful environmental conditions furthers our understanding of basic physiological, ecological, and evolutionary principles. In several cases, evidence is provided for how the adaptation to extreme environments promotes the emergence of new species. Furthermore, a link is made to conservation biology, and how human activities have exacerbated existing extreme environments and created new ones. The book concludes with a discussion of major open questions in our understanding of the ecology and evolution of life in extreme environments.

Implicit and Explicit Learning of Languages Nicholas Carlton Ellis 1994 The distinction between implicit and explicit learning is currently a major theme within cognitive psychology, particularly in relation to learning and memory. Reasoning that no single discipline is responsible for the learning process, the editor employs a cognitive approach to combine contributions from specialists in disciplines such as psychology, linguistics, neuroscience, and computing. The book presents a general study of how learning takes place and applies this knowledge. Learning can take place implicitly, with explicit problem-solving skills, or as a result of explicit instruction, specifically to how these various processes affect and influence language acquisition. Key Features * Concerns human learning generally and the ability to acquire languages in particular, bringing together the disciplines of psychology, linguistics, neuroscience, and computing * Examines one type of learning * 3/4 language acquisition * 3/4 drawing together some of the principal scientists and ideas in the area
