[User Instruction Manual - General Electric LM1500, \(Two Shaft\) Gas Turbine I.](#) W. Dingwell 1970 A mathematical model has been developed for an aircraft-derivative two shaft gas turbine power plant (Model LM1500) manufactured by General Electric Company, Gas Turbine Department. By use of this mathematical model, the performance of the gas turbine may be calculated to environmental transients and electrical load changes. This calculation procedure has been programmed in FORTRAN 4 and the resulting set of instructions have been executed on several digital computers.
