Medical Arabic Abderrahman Zouhir 2020-07-22 Medical Arabic is a valuable resource for students interested in learning medical Arabic at ACTFL level Advanced Low. Effective communication is essential in health care, and communication is most effective when both parties share a common language, therefore resulting in a comfortable relationship between health care provider and patient. This textbook is intended for those with prior knowledge of Arabic language and grammar. It is designed to provide students with the linguistic and cultural competencies and medical Arabic terminology necessary to communicate in medical settings such as a hospital, clinic, or a community health care facility. Students will be able to ask questions in Arabic and provide answers in common medical situations, conduct patient interviews, and understand a wider variety of possible responses from patients. The book provides clear explanations of medical vocabulary and concepts as they occur in the reading materials to encourage active interaction with the text. The book's drills are designed as either in-class exercises or homework. The answer key for the book exercises is also provided as a downloadable e-resource. Written by dynamic authors who taught Arabic as a foreign language for several years and reviewed by physicians and professionals in the field, the book is an essential guide for students in medical school, biology, and other science majors. Students will find Medical Arabic more than merely a textbook but rather a pathway to enhance their communication skills effectively.

High Acuity Nursing Pamela Stinson Kidd 2001 A supplement for a variety of junior/senior-level courses in Critical Care or Advanced Med-Surg Nursing courses and others throughout the nursing curriculum. Written by practicing nurses in acute care, this text provides students with a basic understanding of complex patients and the ability to provide nursing care across a variety of settings by using a series of reality-based, self-paced, self-contained modules that focus on multiple system problems frequently encountered in working with high acuity patients. Using a "nuts and bolts" approach, it addresses essentials by using examples, analogies, and metaphors; focuses on concepts and principles that can be applied across practice settings and patient populations; and includes nursing diagnoses. The modules progress from simple to complex and contain pretests and posttests with answers, learning objectives, glossary, abbreviations, and review questions and answers.

Feedback Control of Dynamic Systems Gene F. Franklin 2011-11-21 This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. For senior-level or first-year graduate-level courses in control analysis and design, and related courses within engineering, science, and management. Feedback Control of Dynamic Systems, Sixth Edition is perfect for practicing control engineers who wish to maintain their skills. This revision of a top-selling textbook on feedback control with the associated web site, FPE6e.com, provides greater instructor flexibility and student readability. Chapter 4 on A First Analysis of Feedback has been substantially rewritten to present the material in a more logical and effective manner. A new case study on biological control introduces an important new area to the students, and each chapter now includes a historical perspective to illustrate the origins of the field. As in earlier editions, the book has been updated so that solutions are based on the latest versions of MATLAB and SIMULINK. Finally, some of the more exotic topics have been moved to the web site.

Delivering High-Quality Cancer Care Committee on Improving the Quality of Cancer Care: Addressing the Challenges of an

Aging Population 2014-01-10 In the United States, approximately 14 million people have had cancer and more than 1.6

million new cases are diagnosed each year. However, more than a decade after the Institute of Medicine (IOM) first

studied the quality of cancer care, the barriers to achieving excellent care for all cancer patients remain daunting.

Care often is not patient-centered, many patients do not receive palliative care to manage their symptoms and side

effects from treatment, and decisions about care often are not based on the latest scientific evidence. The cost of

cancer care also is rising faster than many sectors of medicine--having increased to \$125 billion in 2010 from \$72

billion in 2004--and is projected to reach \$173 billion by 2020. Rising costs are making cancer care less affordable

for patients and their families and are creating disparities in patients' access to high-quality cancer care. There

also are growing shortages of health professionals skilled in providing cancer care, and the number of adults age 65

and older--the group most susceptible to cancer--is expected to double by 2030, contributing to a 45 percent increase

in the number of people developing cancer. The current care delivery system is poorly prepared to address the care

needs of this population, which are complex due to altered physiology, functional and cognitive impairment, multiple

coexisting diseases, increased side effects from treatment, and greater need for social support. Delivering High-

Quality Cancer Care: Charting a New Course for a System in Crisis presents a conceptual framework for improving the

quality of cancer care. This study proposes improvements to six interconnected components of care: (1) engaged patients; (2) an adequately staffed, trained, and coordinated workforce; (3) evidence-based care; (4) learning health care information technology (IT); (5) translation of evidence into clinical practice, quality measurement and performance improvement; and (6) accessible and affordable care. This report recommends changes across the board in these areas to improve the quality of care. Delivering High-Quality Cancer Care: Charting a New Course for a System in Crisis provides information for cancer care teams, patients and their families, researchers, quality metrics developers, and payers, as well as HHS, other federal agencies, and industry to reevaluate their current roles and responsibilities in cancer care and work together to develop a higher quality care delivery system. By working toward this shared goal, the cancer care community can improve the quality of life and outcomes for people facing a cancer diagnosis.
